DETAILED ACTION

Response to Amendment

1. Under further consideration of the claimed subject matters as[†] claims 1 and 6 are amended, the finality of the rejection of the last Office action is withdrawn in view of the new rejection, which follows.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1, 6, 26-29, 32-36 and 39 rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claims contain subject matter, which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventors, at the time the application was filed, had possession of the claimed invention.

Each of the base claims 1 and 6 recites the following limitation "calculating a light-output correction for each of a plurality of subsets of the LEDs, each light-output correction being calculated based at least upon factors pertaining to ... (b) an average light output from at least a plurality of subsets of the LEDs" (emphasis added), which is not supported by the current Specification as originally filed. The Specification indicates that the light-output correction for each of the subsets/groups of LEDs is calculated

Art Unit: 2861

based on the average for the exposure system, which is further defined as the average of the entire LED array (see Specification, page 9, lines 25-27 and page 11, lines 28-29). The average light output of the entire LED array is basically calculated based on the measured light output of each of the LED element in the array and is different from the average light output from the plurality of subsets of the LEDs as claimed, which would require measuring the light output of the subsets of LEDs as a whole. In other words, the average light output from the plural subsets of the LEDs is an unknown parameter and/or is not requested in the calculation of the light-output correction.

Claims 26-29, 32-36 and 39 are dependent from claims 1 and 6 above, and are therefore indefinite.

Due to the uncertainty of the limitation, the claims are deemed to be so unclear as to preclude consideration in view of the prior art.

Appropriate correction is required.
